USABILITY TESTING TRANSCRIPTS

Interviewer: Okay, that's all for the testing. So, what do you guys think of our prototype so far?

Participant 1: Oh yeah, I think it's really nice. Like, I can see how it would be useful.

Participant 2: Yeah, same. I think it's a pretty cool idea.

Interviewer: Oh, thank you! Do you guys think it would actually help you out a lot?

Participant 1: Yeah, definitely. We go to concerts quite a lot, so I think something like this would be really helpful, especially if we get separated in the crowd or something.

Participant 3: Yeah, especially the arrow thing. I think that's really useful because you can just follow it instead of trying to find each other yourself.

Participant 2: Yeah, that was pretty cool. It makes it a lot easier.

Interviewer: Oh, that's good to hear! Was there anything that you found a bit confusing or anything that you think we could improve?

Participant 3: Um, yeah, the arrow was a bit weird sometimes. When I rotated the watch, it seemed fine, but when I tried sliding it sideways, it kind of went off in the wrong direction.

Participant 1: Oh yeah, I noticed that too. I wasn't really sure if I was moving it wrong or if it was just the prototype.

Interviewer: Got it. Did anyone else experience something similar?

Participant 2: I think mine was okay when I rotated it. I didn't really notice the issue until you guys mentioned sliding it, but yeah.

Interviewer: Okay, that's helpful. What about the lights? The idea is that they get brighter when the two watches are closer together and dimmer when they're further apart. Did you notice that while using it?

Participant 4: Honestly, not really.

Participant 2: I noticed the lights were on, but I didn't really notice them changing that much.

Participant 1: Same.

Interviewer: So, if you were using this without us explaining how it works, do you think you'd be able to tell whether you were getting closer to the other person?

Participant 4: Probably not if it's just from the brightness, no.

Participant 3: Yeah, I think I'd mostly just follow the arrow.

Interviewer: Okay. What do you think would make that easier to notice?

Participant 3: Hmm… I think… Maybe, like, the lights could, like, blink faster when you're getting, like, closer? Like, slower when you're far away and I don't know, faster when you're near the other person.

Interviewer: Oh my gosh, yeah. That's actually a really good idea.

Participant 3: Hahaha, I don't know if it's hard or not though.

Interviewer: No, it's fine, we can definitely test it out. I think it's feasible.

Participant 3: Alright, alright. Yeah, I think that could be more noticeable than just changing the brightness?

Interviewer: Alright, is there anything else you guys found confusing or unnecessary on the screen?

Participant 5: Um, sorry, can I ask what the four little dots are for?

Interviewer: Yeah, of course. What did you think they were when you first saw them?

Participant 5: Honestly, I thought they were just part of the design. I didn't realise they actually meant anything.

Participant 4: Wait, which dots? Which… Oh, that… I didn't even notice them.

Participant 2: I saw them, but I didn't know what they were for either.

Interviewer: Oh okay, sorry about that. I guess they weren't really communicating their purpose clearly. If you had to guess, what would you expect them to do?

Participant 3: Honestly, like… Maybe… Hmm… actually, I don't know.

Participant 5: Maybe show different levels or something? But I wouldn't have known they were about distance.

Interviewer: Yup, you're close.

Participant 5: Huh? Oh! They're related to distance? I just guessed it.

Interviewer: Yeah, yeah, yeah. Sorry about that, those are just proximity indicators. Like, to show how close the two watches are.

Participant 1: Oh, I think the lights already kind of do that, though. So I'm not sure why the dots are necessary?

Interviewer: Oh, I see. Would you prefer to keep them if we made their meaning clearer, or would you rather remove them?

Participant 5: Hmmm, I would… I mean… I'd probably remove them, to be honest. Unless they actually do something important, I don't think I'd use them.

Interviewer: That's fair. Before we finish, is there anything else you'd change, even something small?

Participant 1: No.

Participant 3: Yeah, I don't think I have anything else.

Interviewer: Okay, awesome! Thank you guys so much for taking the time to test our prototype and for sharing your thoughts. We really appreciate all your feedback. It's been really helpful, and we'll definitely take everything into consideration when we make our improvements.

Participant 2: Yeah, no worries.

Interviewer: Thank you so much, guys.
